## I have an Evoke C-F6 or Evoke F3 and I could not find my desired internet radio station in the database

Technical Support - 2021-03-15 - General Internet Radio Questions

Unfortunately as of now, it is not possible to add new radio stations because the possibility to update the database has been limited by the 3rd party provider implemented in these models. We understand that this can cause frustrations and we are trying to switch providers.

Customers who are signed up to our newsletter will be informed in case of any changes

Your old pre-sets and radio stations already in the database are however not affected and still can be used as usual until such time a provider change may be possible. As a workaround, you could access your desired station through a mobile device and connect to your product via Bluetooth.

### **How to listen to internet radio stations using Bluetooth technology**

Press the menu button and select Bluetooth from the source menu

Open the Bluetooth settings menu on your mobile device and find the Evoke C-F6/F3, select this to pair

Once paired, make sure the volume on the mobile device is set to maximum

Then you can select the content you would like to hear and it will play through the radio's speakers.
