Siesta display brightness too low

Laura - 2020-11-03 - General Questions

The display brightness on my Siesta radio is too low

We specifically made the decision to keep the functionality of the radio as simple as possible and minimize the number of options and as a result of this, the display brightness has been carefully tuned to meet the vast majority of ambient settings, and is only controlled via the '**Auto-Dimmer**' at the front of the radio.

There is no manual control over the brightness settings on this radio I'm afraid.
